WaterStop Options

WaterStop Technology

made for professionals

We are particularly pleased to present our new Waterstop product line. For many years BEXAMED™ have been supplying a tried and trusted collection of emergency medical bags. With our new Waterstop range our focus is on bringing the existing models to a new quality level by introducing innovative material and superior workmanship to meet the challenges of the most demanding environments.

Waterstop Technology

- Water and dust proof
- Lighter weight but high strength
- Easy cleaning
- Lowers risk of cross infection
- Longer life

New Waterstop zips

In combination with waterproof material the use of the water-sealing zips creates a dry and clean storage environment for moisture sensitive items such as bandages and diagnostic equipment.

BEXAMED™ extra strong pullers

For medical professionals every move must be perfectly executed even under great pressure. Our new zipper pullers are extremely strong and guarantee smooth, safe and fast access

Traceable Serial Number

Each bag is tracked with an individual serial number for identification and tracking

Choose Either...

Waterstop emergency bags are available in a choice of two water and dust-proof materials, both building on best quality 600 denier polyester material.

Fabric Version

Our new Waterstop polyester fabric bags are made of heavy duty fibre.

The inside of the material is coated with two layers of PU (polyurethane) coating and the outside undergoes a permanent Teflon® impregnation.

Wipe-down PVC Version

PVC Wipe Down Waterstop bags have all the benefits of the standard fabric, but with an especially lightweight, high strength PVC coating.

All Waterstop Bags come supplied with a 2 year warranty

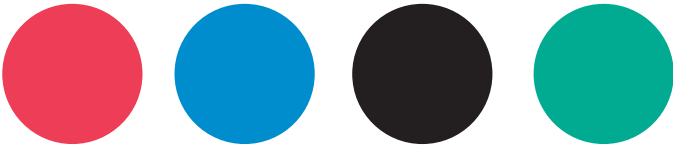

Customisation

Individual solutions tailored to your needs

With two fabric groups and 4 different colours we provide a wide range of options for individualisation. The printable and changeable front reflective tape and a Velcro patch offer further space for branding and logo positioning.

We offer a large selection of high quality ampoule pouches, emergency bags, emergency backpacks, bags for oxygen cylinders and other accessories. We can manufacture according to your individual specifications and wishes.

Please contact us for bespoke bag solutions.

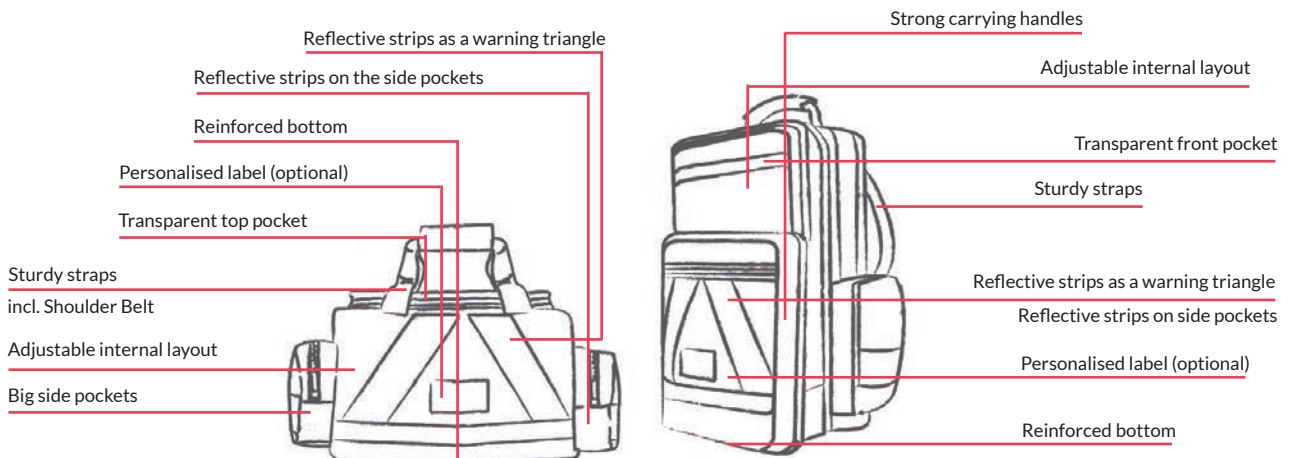

Green bags are available on request but are subject to a minimum order quantity of 50 units

Quality in finest detail

The devil is in the details. A highlight of the Waterstop series is definitely the embedded reflective tapes. According to our statistics, 80% of complaints of our bags in the first 6 months lead back to damaged reflective tapes. We have taken the challenge and now have all reflective tapes embedded into the main material to achieve maximum protection. It is a small detail but it takes the quality and durability of our bags to a new level. Additionally we have also introduced a more robust version of critical components such as buckles, straps, clips and handles

Specifications
